

LAVIE

PURE WATER WITH UNBEATABLE TASTE

Without filters or installation,
purify your tap water in 15 minutes.

LAVIE is a premium tap water purification solution that uses no consumables and requires no maintenance.

This nature-inspired innovative technology uses chlorine photolysis by UV-A light beam. It generates active oxygen molecule which purifies water in 15 minutes.

LaVie purifier reduces drastically the level of chlorine, and suppresses the unpleasant taste and smell often associated with tap water. Molecules of chemicals, pesticides and medicine are broken into harmless components.

This technology allows to ban definitively the consumption of plastic water bottles that threaten the fragile balance of our planet's ecosystems.

LAVIE is for just about everybody: sedentary or nomad, athletes, office workers or travelers. The range of LAVIE purifiers comprises 0.5 liter and 1 liter models.

Besides the pleasure and the comfort provided by **LAVIE** purified water at home, the system is paid back in less than 6 months.

Consumption: 5 Wh/l
\$1 will purify 200 gallons of water.

The carbon footprint to manufacture the aluminum case is offset within a few days of use in comparison with the equivalent consumption of water from plastic bottles.

LAVIE PURE

- The essential best seller
- LaVie® anodized aluminum case
 - Bottle 1 liter LaVie® borosilicate glass, natural bamboo cap with seal
 - 110 / 220V - 12V / 1,5 A AC / DC adapter
